

pdbl^owers Premium Blower Grease

Comparison with Royal Purple Ultra-Performance Grease

Both of these greases are premium NLGI #2 grade, high performance, multi-purpose, synthetic aluminum complex greases ideal for blowers that utilize grease lubrication of the drive-end bearings.

Special additives give both greases superior water wash off properties and provide excellent performance in the most demanding applications.

Both greases are available in standard cartridges for use with hand-operated grease guns.

For applications with incidental food contact, pdbl^owers offers a comparable grease that meets H1 requirements (FDA 21 CFR 178.3570). Part # 50467.FG

TYPICAL PROPERTIES	PDBLOWERS	ROYAL PURPLE
	Synthetic Blower Grease	
NLGI Grade	2	2
Thickener type	Aluminum Complex	Aluminum Complex
Worked Penetration	295	280
Base Oil Viscosity @ 40°C	180	180
Base Oil Viscosity @ 100°C	16.2	16.2
Dropping Point °C (°F)	260 (500)	274 (525)
Water Washout 175°F (69°C)	5% max	4.5%
Four Ball EP Weld Point	415	400
Four Ball EP Load Wear	40	65.2
Rust Protection	PASS	PASS
Temperature Range °C	-15 to 149	-40 to 177
Part Number	50467	26573

MAINTENANCE TIPS

- Do not overgrease
- Apply with a hand pump only, as a pneumatic grease gun can fill too quickly and damage the seals
- Keep grease vents clear to allow grease to escape and prevent damage to seals
- Reference blower manual for recommended greasing intervals based on your blower's operating hours
- If you are switching from another type of grease, make sure to fully purge the old grease as the two greases may separate if mixed
